

Day 2 - Python Data Types & Operators

Day 2 Completed by: Pavithra V

Topics Covered:

1. Python Data Types:

- Integer (int)
- Float (float)
- String (str)
- Boolean (bool)
- List
- Tuple
- Dictionary

2. Type Checking and Conversion:

- Used `type()` to check types
- Used `int()`, `float()`, `str()` for conversion

3. Operators Practiced:

- Arithmetic: `+`, `-`, `*`, `/`
- Comparison: `>`, `<`, `==`, `!=`
- Logical: `and`, `or`, `not`
- Membership: `in`, `not in`
- Identity: `is`, `is not`

Day 2 - Python Data Types & Operators

4. Sample Outputs:

- Successfully created variables of different types
- Performed operations and saw correct outputs
- Practiced logical and membership expressions

Screenshot also verified by ChatGPT for completion.

Progress: Excellent work! You are building a solid foundation in Python.

Tomorrow: Day 3 - Conditional Statements (if, elif, else)
